Editorial by the Project Coordinator Dr Haris KONTOES, Remote Sensing PhD, Research Director of NOA

We feel like it has been a success in BEYOND because our work makes people’s lives a little better, and more safe, and as such it was recognised in the Copernicus Masters Awards Competition of this year, where the FIREHUB tool won the Best Challenge Service prize of 2014. The FIREHUB service provides unique real time information about the status of the active fires and the spread of fires and fire plumes over the ground.

And there is where satellite and IT technologies comes to be of great help. The unique feature of the FIREHUB service is the full exploitation of the very high temporal resolution of the METEOSAT satellites acquiring images every 5 minutes from the entire globe. Through complex modelling, FIREHUB engine combines the satellite observations with additional evidences of fire occurrence, weather forecasts, fuel, and landscape data, in order to derive and disseminate on a 5 minute basis reliable pictures of the active fires with an enhanced spatial resolution of up to 500 meters on the ground, that is 50 times better than the spatial resolution of the raw satellite observations (note that the MSG SEVIRI sensor resolution is ~3.5km over the SE Europe). Along with the fire evolution, FIREHUB provides hourly forecasts of the 3-dimensional smoke field with organic carbon concentration spreads in the atmosphere. Finally relying on any available satellite data of high or very high spatial resolution, including the future Sentinel-2 data, the FIREHUB tool is designed to deliver daily, weekly, and seasonal burned area maps by invoking a fully automatic production chain. For more information visit: <http://ocean.space.noa.gr/FireHub>

What is BEYOND?

Established in the framework of the FP7-REGPOT-2012-2013-1 Coordination and Support Actions - Theme Area “4.1 Unlocking and developing the research potential of research entities established in the EU’s Convergence regions and Outermost regions”, the **BEYOND** project (EC GA No 316210) aims at maintaining and expanding the existing state-of-the-art interdisciplinary research potential, by **Building a Centre of Excellence for Earth Observation based monitoring of Natural Disasters** in South-Eastern Europe.

BEYOND foresees to increase its access range to the wider Mediterranean region through the integrated cooperation with twinning organizations in Europe and USA.

BEYOND Center of Excellence is hosted at the National Observatory of Athens (NOA) - Institute of Astronomy, Astrophysics, Space Applications and Remote Sensing (IAASARS). The operations of BEYOND officially started in June 2013, and will last for the next three years. The approved EC budget contribution for BEYOND is 2.305.650 Euros.

Copernicus Masters 2014 Award

Fire Hub: A Space based Fire Management Hub - Winner of the Best Service Challenge of the Copernicus Masters Awards 2014

The FireHub Winning Team (Photos: © Jan Kobel)

The National Observatory of Athens participated in the Best Service Challenge of the Copernicus-masters competition with the operational EO based fire management service, which was developed in the framework of the **BEYOND project**. The submitted service is entitled "**FireHub: A Space Based Fire Management Hub**", and has been elected as the winner of the Best Service Challenge of the Copernicus Masters 2014 by an experts committee. The Copernicus-masters competition organised by [Anwendungszentrum GmbH Oberpfaffenhofen](http://www.anwendungszentrum.de), aiming to support the development of market-oriented applications that use data from the European Union's Copernicus programme (previously known as Global Monitoring of Environment and Security, or GMES). "**FireHub**" is a service platform that consolidates a real-time fire detection and monitoring application, a large scale Burnt Scar Mapping during and after wildfires, and a fire smoke dispersion forecasting tool, based on the integration of space technologies with geospatial information and meteorological data.

The service has been qualified in the framework of several EC, Copernicus/GMES & ESA projects, relying on fully scalable and transparent automatic processes allowing the transferability of the applications to other climatic and geographic zones in Europe.

The FIREHUB platform addresses real decision-

makers' needs and has been deployed on an operational basis to several user stakeholders, including the Fire Disaster Management Centers of Fire Brigades, the Ministry of Environment Energy and Climate Change, the Forestry Services, the Hellenic Telecom Organization, and various Local and Regional civil protection authorities over Greece. The User base has been rapidly expanded during the last summer with more than 500 independent connections to FIREHUB tool on a daily basis (institutional users and public).

"**FireHub**" is also integrated into the Global Fire Monitoring Center that belongs to the International Strategy of UN for Disaster Reduction.

Participation of BEYOND in the EU Presidency events

2nd South-Eastern Europe GEO Workshop

Integrating Earth Observation Data and Services for Monitoring the Environment, Protecting the Citizens and Stimulating the Regional Economic Growth
Athens, 20-21 October 2014

BEYOND successfully organized the [2nd South-Eastern European GEO Workshop](#) on “Integrating Earth Observation Data and Services for monitoring the Environment, protecting the citizens and stimulating the regional economic growth” focused on North Africa, Middle East and Balkan Region, a two-day workshop that took place in Athens, Greece, on 20th and 21st October 2014.

The purpose of this workshop was to identify, evaluate and report the existing GEO-GEOSS capacities in the region. It allowed assessing the compatibility and adequacy of the on-going initiatives at the European Union level, as well as networking initiatives at regional level over the three regions, towards the development of an integrated, space based and in-situ, observational and service capacity, for the benefit of critical societal sectors, local economies, continuity of businesses, and the protection of citizens and ecosystems from natural and human induced disasters.

All Participants of the 2nd SE EU GEO-Workshop

8th GEO European Project Workshop - SPACE AND SECURITY CONFERENCE

BEYOND participated in the [8th GEO European Project Workshop](#), on 12&13 June 2014, and the [SPACE & SECURITY CONFERENCE](#) on 19&20 June 2014. The Space and Security Conference was co-organised by the General Secretariat for Research and Technology, the National Observatory, the University of Athens, the Greek Ministry of Defense and the European Commission under the auspices of the Hellenic Presidency of the EU.

CHARADMExp Campaign 2014, 20.06. - 10-07.2014

Contact Persons: [Vassilis Amiridis - vamoir@noa.gr](mailto:vamoir@noa.gr)

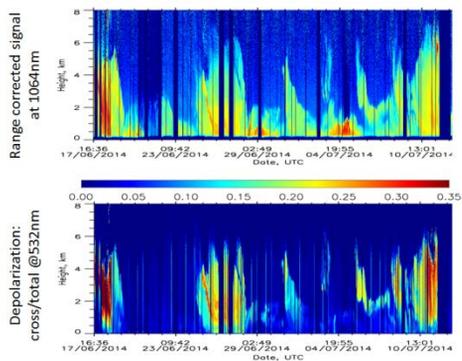

In the framework of BEYOND, NOA organized the [CHARADMExp](#) campaign which took place between 20th of June and 10th of July at [Finokalia Station](#) in Crete, a core [ACTRIS](#) station. The campaign has been funded by the European Space Agency (ESA) and the aim was to derive optical, microphysical and chemical properties of marine aerosol component and its mixture with dust. For that purpose, sophisticated instrumentation was installed on the site for aerosol characterization by ground-based active/passive remote sensing techniques, surface in-situ measurements and airborne observations employing Unmanned Aerial Vehicles (UAVs).

A number of Research Institutes participated in the campaign setting up their instruments on the site, including the [University of Crete](#), the [Leibniz Institute for Tropospheric Research](#), the [Cyprus Institute](#), the [Finish Meteorological Institute](#), the [Universite Lille](#) and the [Davos Physical Meteorological Observatory](#) of the [World Radiation Center](#). On daily basis the campaign has been supported by several modelling services operating at the BEYOND Center of excellence (<http://beyond-eocenter.eu/>) of NOA and partners such as [Barcelona Supercomputing Center](#) and the UK [Met Office](#).

The instrumentation mobilized for the campaign and added to the existing [in-situ instrumentation](#) of Finokalia station consisted of 3 lidars ([PollyXT](#), [EMORAL](#), [HALO](#)), a [Microwave Radiometer](#), 3 [sun-photometers](#) ([CIMEL](#), [PSR](#), [Microtops II](#)), a [UV-MFR radiometer](#), and a [CCN instrument](#).

The model simulations and related forecasts that were utilised to consolidate the measurement strategy were the Real-time fire monitoring system based on MSG/SEVIRI (NOA) (http://ocean.space.noa.gr/seviri/fend_new/index.php), the Smoke dispersion forecasts (NOA), the Prognostic back-trajectories (NOA), the Meteorological and dust forecasts (BSC, NOA) and the real-time dust AOD retrievals from MSG-SEVIRI (UKMO).

During the campaign, 3 dust episodes were monitored for which the BEYOND atmospheric group already started its investigations.

BEYOND

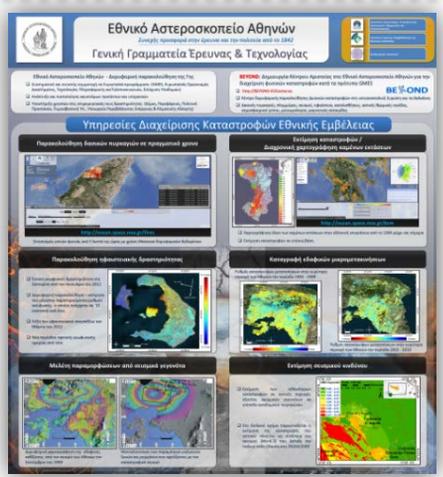

Building a Centre of Excellence for EO-based monitoring of Natural Disasters

Participation of BEYOND in Special Events

Researchers' Night 2014

NOA participated in the "Researchers' Night 2014" mega event, on September 26, 2014, at Democritus NCSR, Athens, Greece. The Researcher's Night, is the largest pan-European celebration of science and research, with the participation of academic/research centers from 300 cities in Europe. The presentation of NOA focused on BEYOND efforts and services to setup innovative observational solutions (in-situ and space based), in order to build a Center of Excellence for Earth Observation-based monitoring of Natural Disasters (<http://beyond-eocenter.eu/>). [Urban Thermal Environment](#)

79th Thessaloniki International Fair

NOA participated in the 79th HELEXPO - Thessaloniki International Fair from 7 to 14 of September 2014. NOA's presentation focused on the services delivered through the BEYOND Center of Excellence in the domain of fire disaster management. During the event, the efforts for setting up a multi hazard management approach based on Earth Observation solutions are highlighted to the open public.

BEYOND provides specific weather information over the NOA's Aristarchos Telescope site at the Helmos mountain Observatory. This information is provided based on WRF_ARW daily forecasts at a spatial horizontal resolution of 4x4 km, and with a forecasting horizon of 4 days. The forecasts refer to wind and humidity atmospheric fields, as they are considered as the most critical parameters for the operation of the telescope.
