iSPEX INITIAL CAMPAIGN

Dutch consortium (Leiden Observatory, NOVA, KNMI, RIVM, SRON), ‘*Academische Jaarprijs 2012*’:

- Development add-on and app
- Production of 10.000 add-ons
- National measurement days on 8 July en 5 September 2013

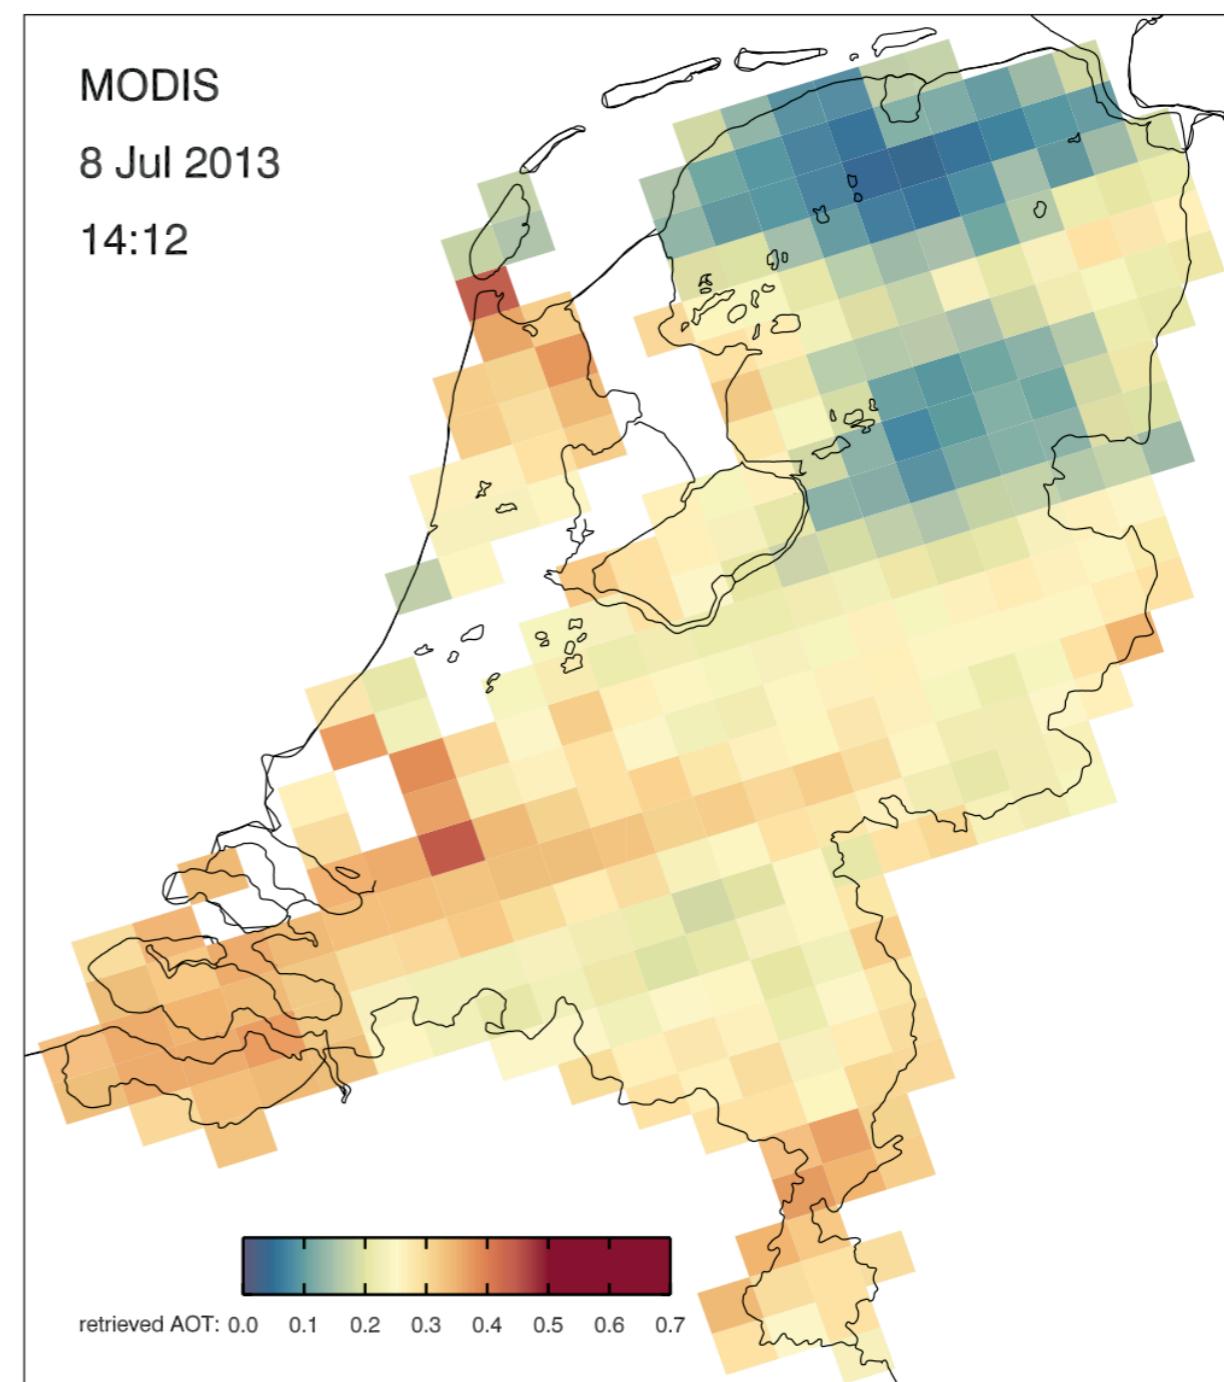

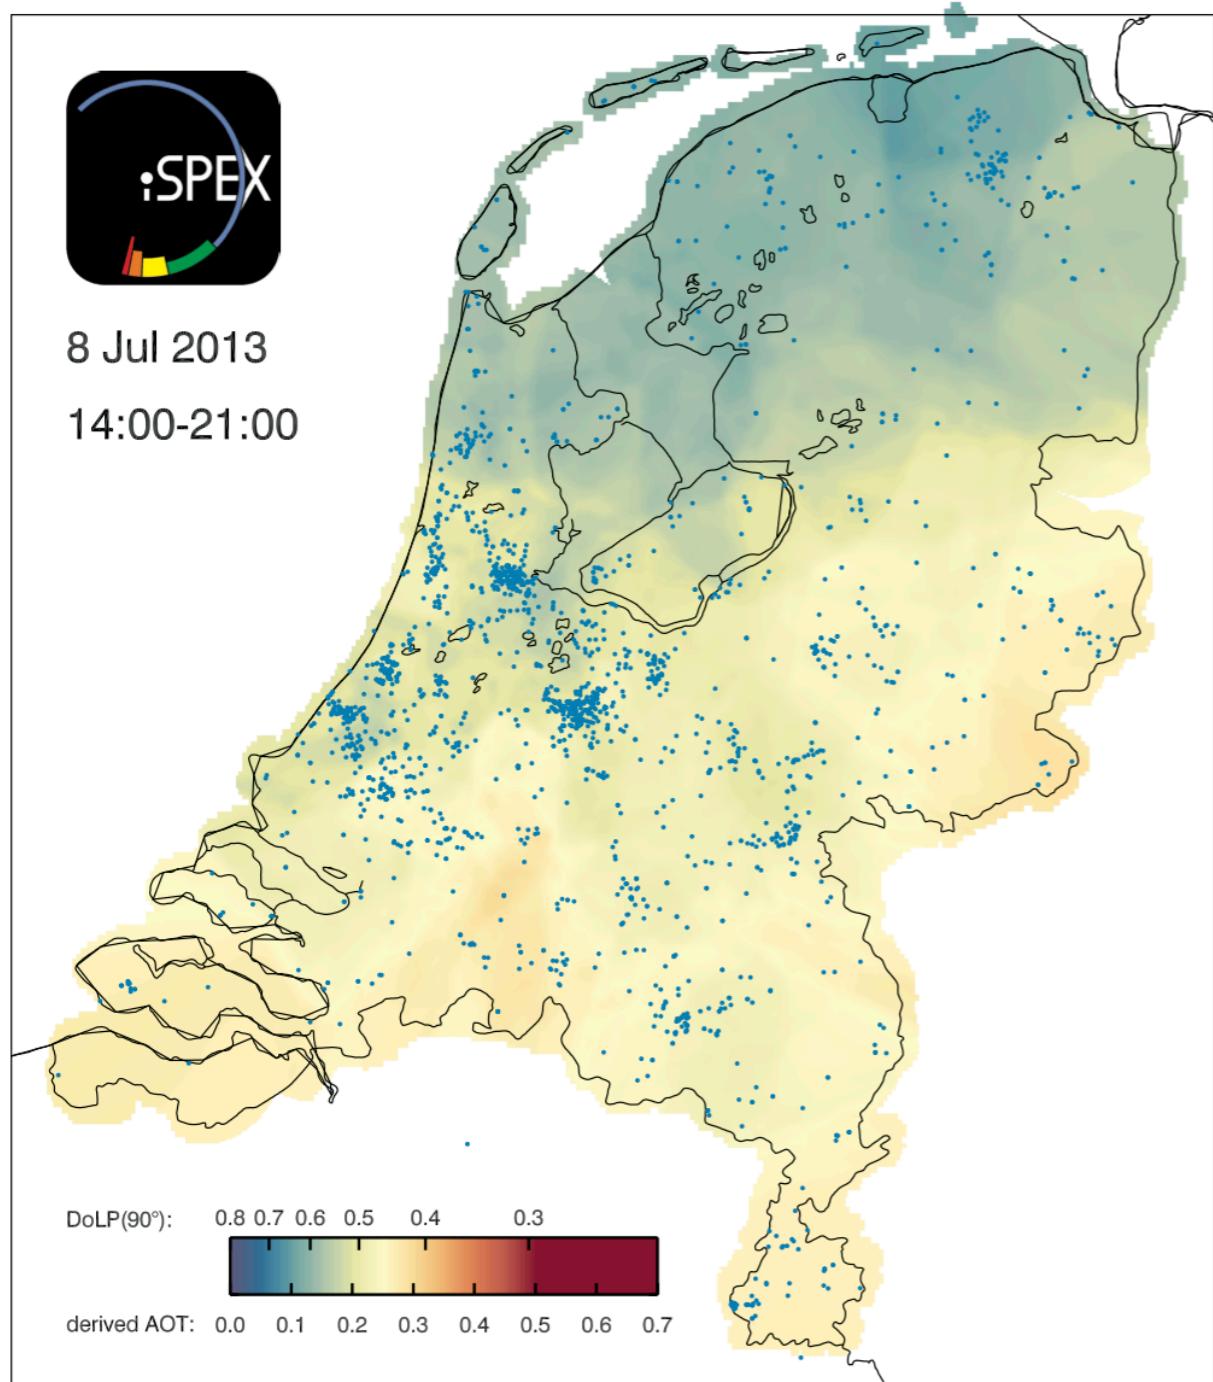

>200,000 PHOTOS!

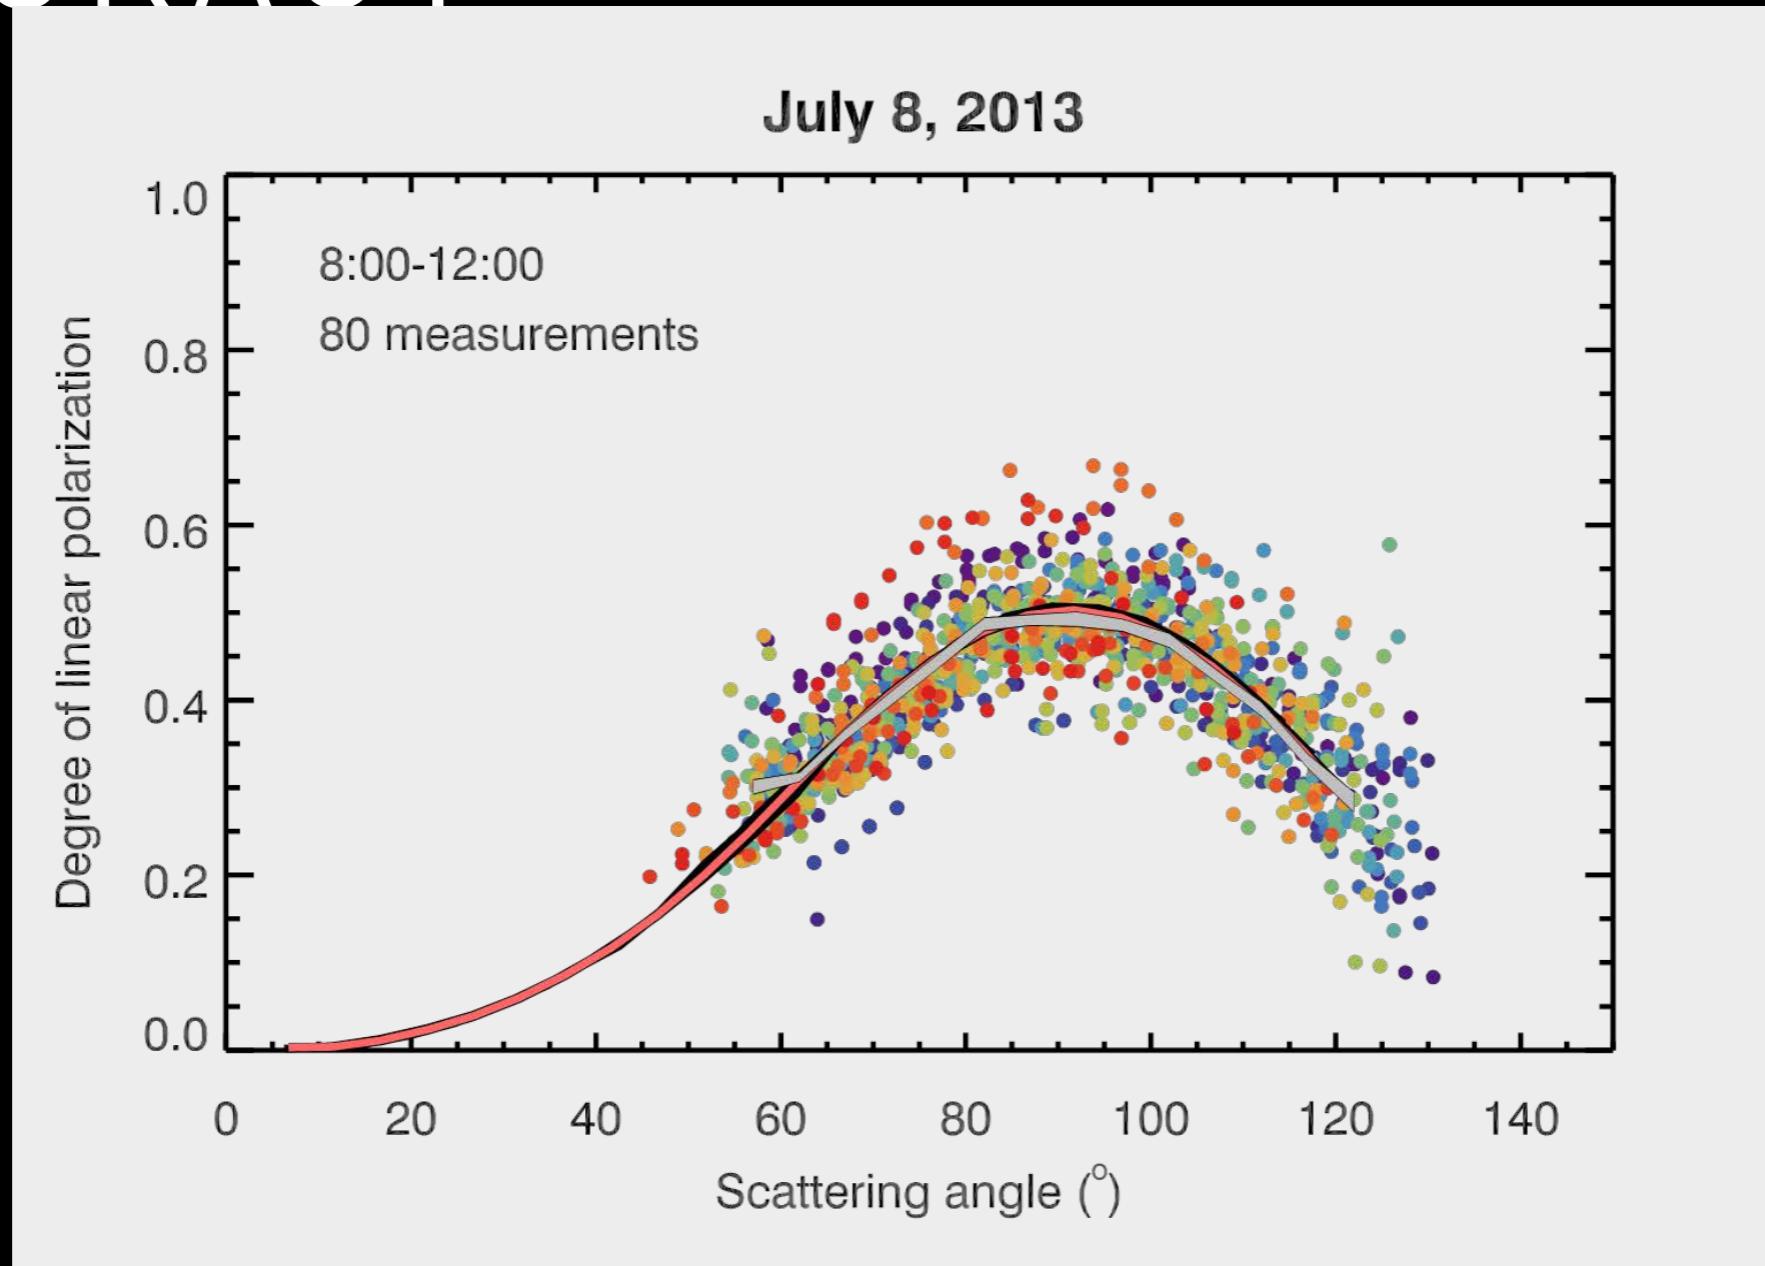

8 JULY 2013:

RESULTS

ISPEX ACCURACY

Snik, F., et al. (2014), Mapping atmospheric aerosols with a citizen science network of smartphone spectropolarimeters, *Geophys. Res. Lett.*, 41, 7351–7358,
doi:10.1002/2014GL061462

LIGHT2015: iSPEX-EU

A first European-wide citizen science campaign for the measurement of aerosols

- 1 September – 15 October 2015
- iSPEX observations on cloud-free days
- 9000 participants - citizens and scientists - in selected major cities

... a first step towards a worldwide network of citizens, scientists and others for the observation of air pollution

Smog, Paris, March 2014 (source: China Daily)

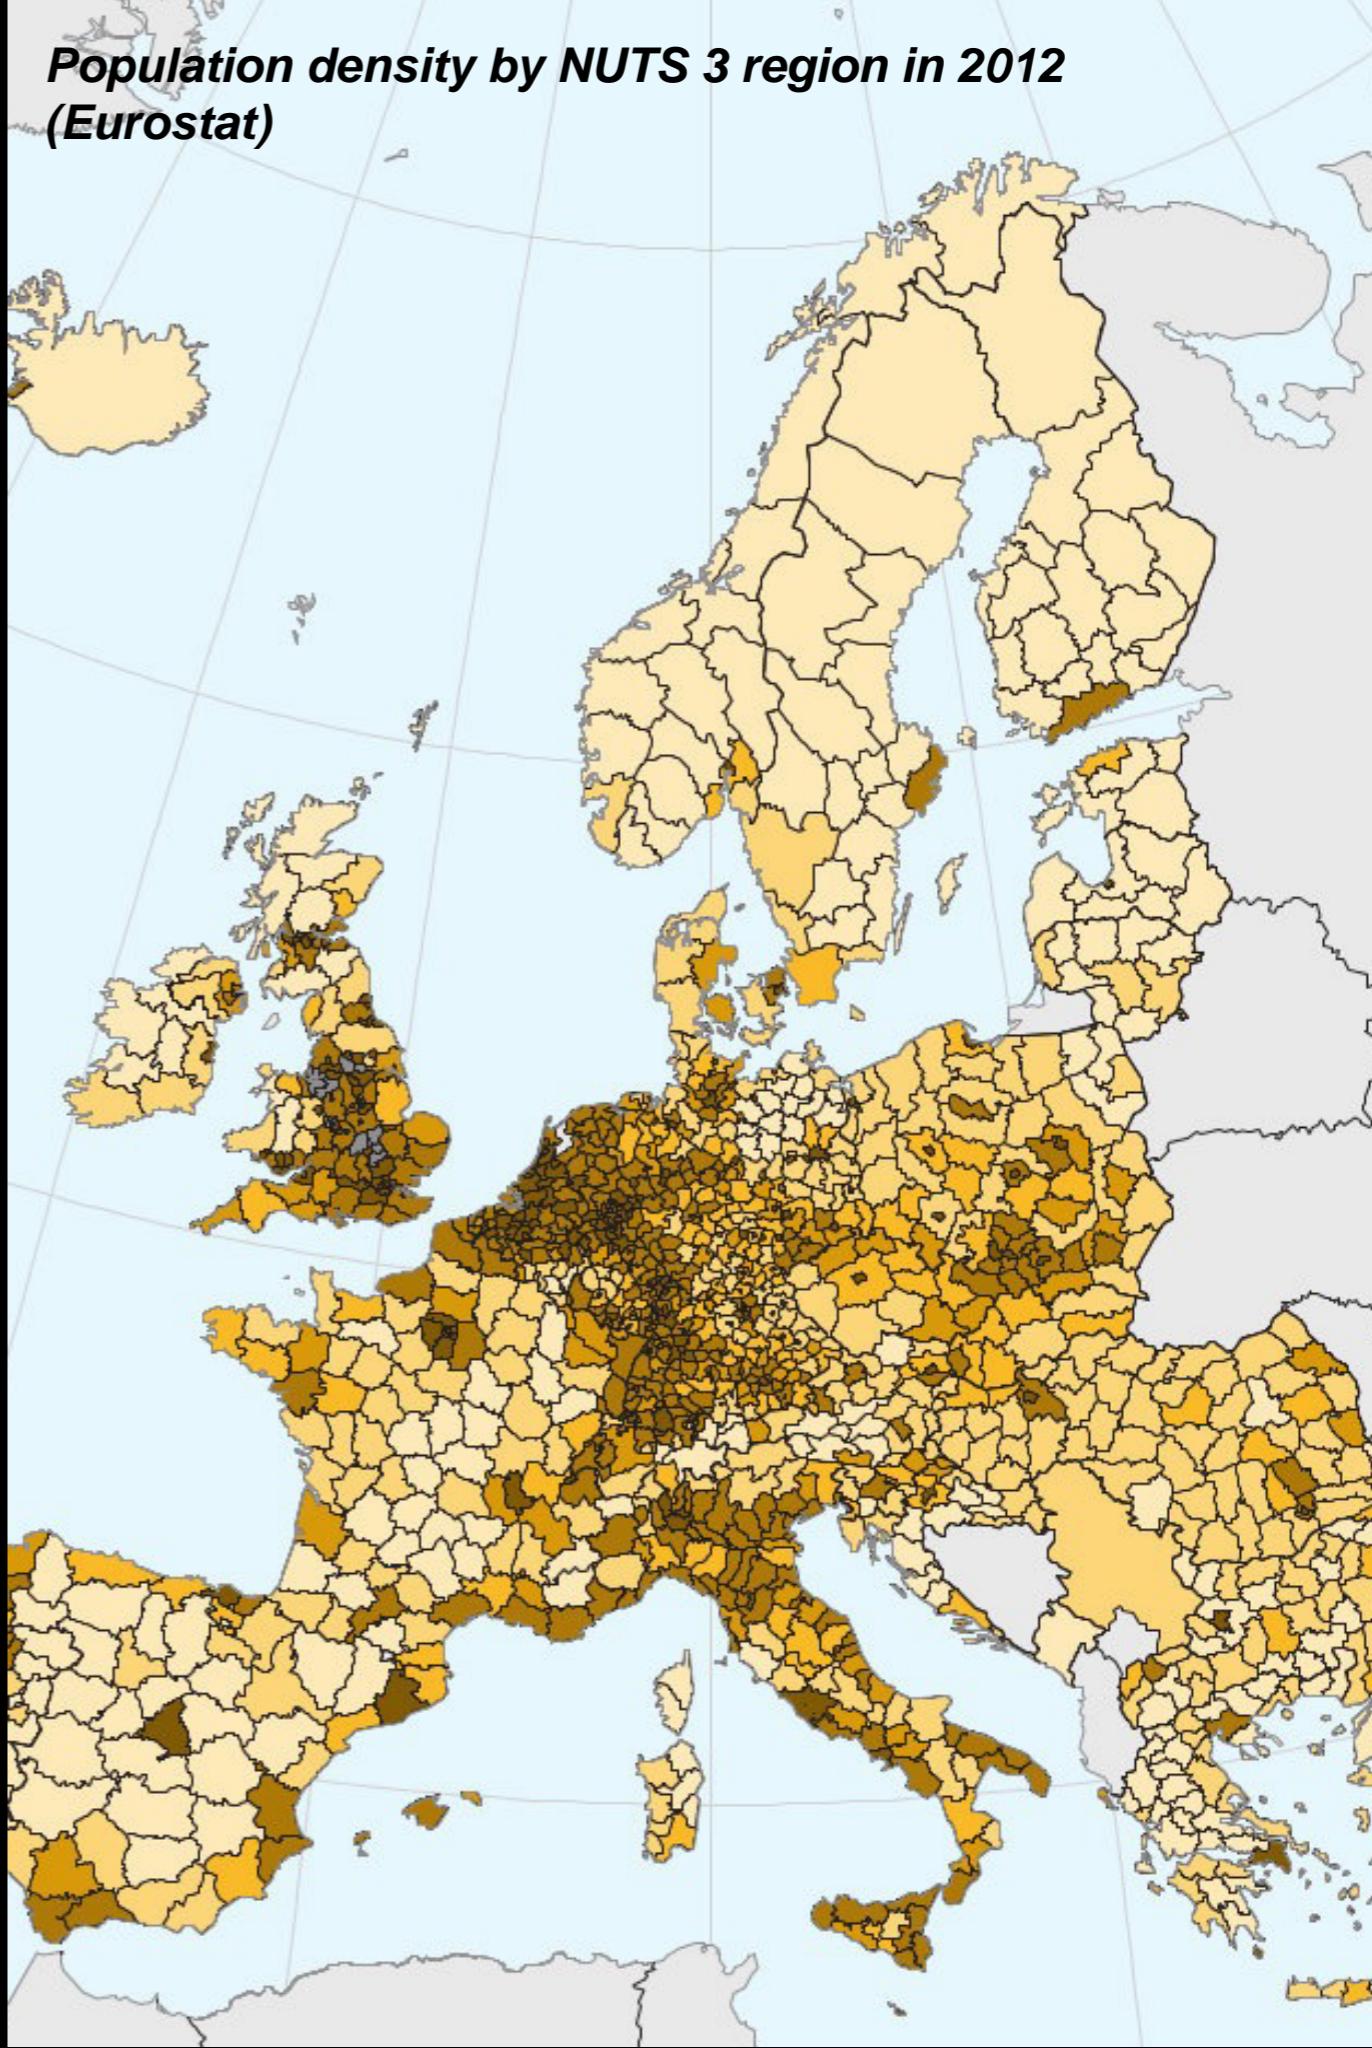

SELECTION OF CITIES

Criteria:

- Local organisation (mainly personal scientific and other contacts iSPEX team, air quality network)
- Population density (Eurostat)
- iPhone usage (Mobileplanet, Statcounter)
- Meteorology and air quality
- Europe representing distribution

... a challenge!

*Population density by NUTS 3 region in 2012
(Eurostat)*

CITY CAMPAIGNS

Approach:

- Leiden Observatory: central role for distribution and campaign, incl. provision of training materials
- Local partners: distribution, training, motivating citizen participants
- 500-1000 add-ons per city

Goal:

Europe-wide citizen involvement in science through CS with iSPEX: (1) outreach and (2) pilot case for potential scientific use of CS data

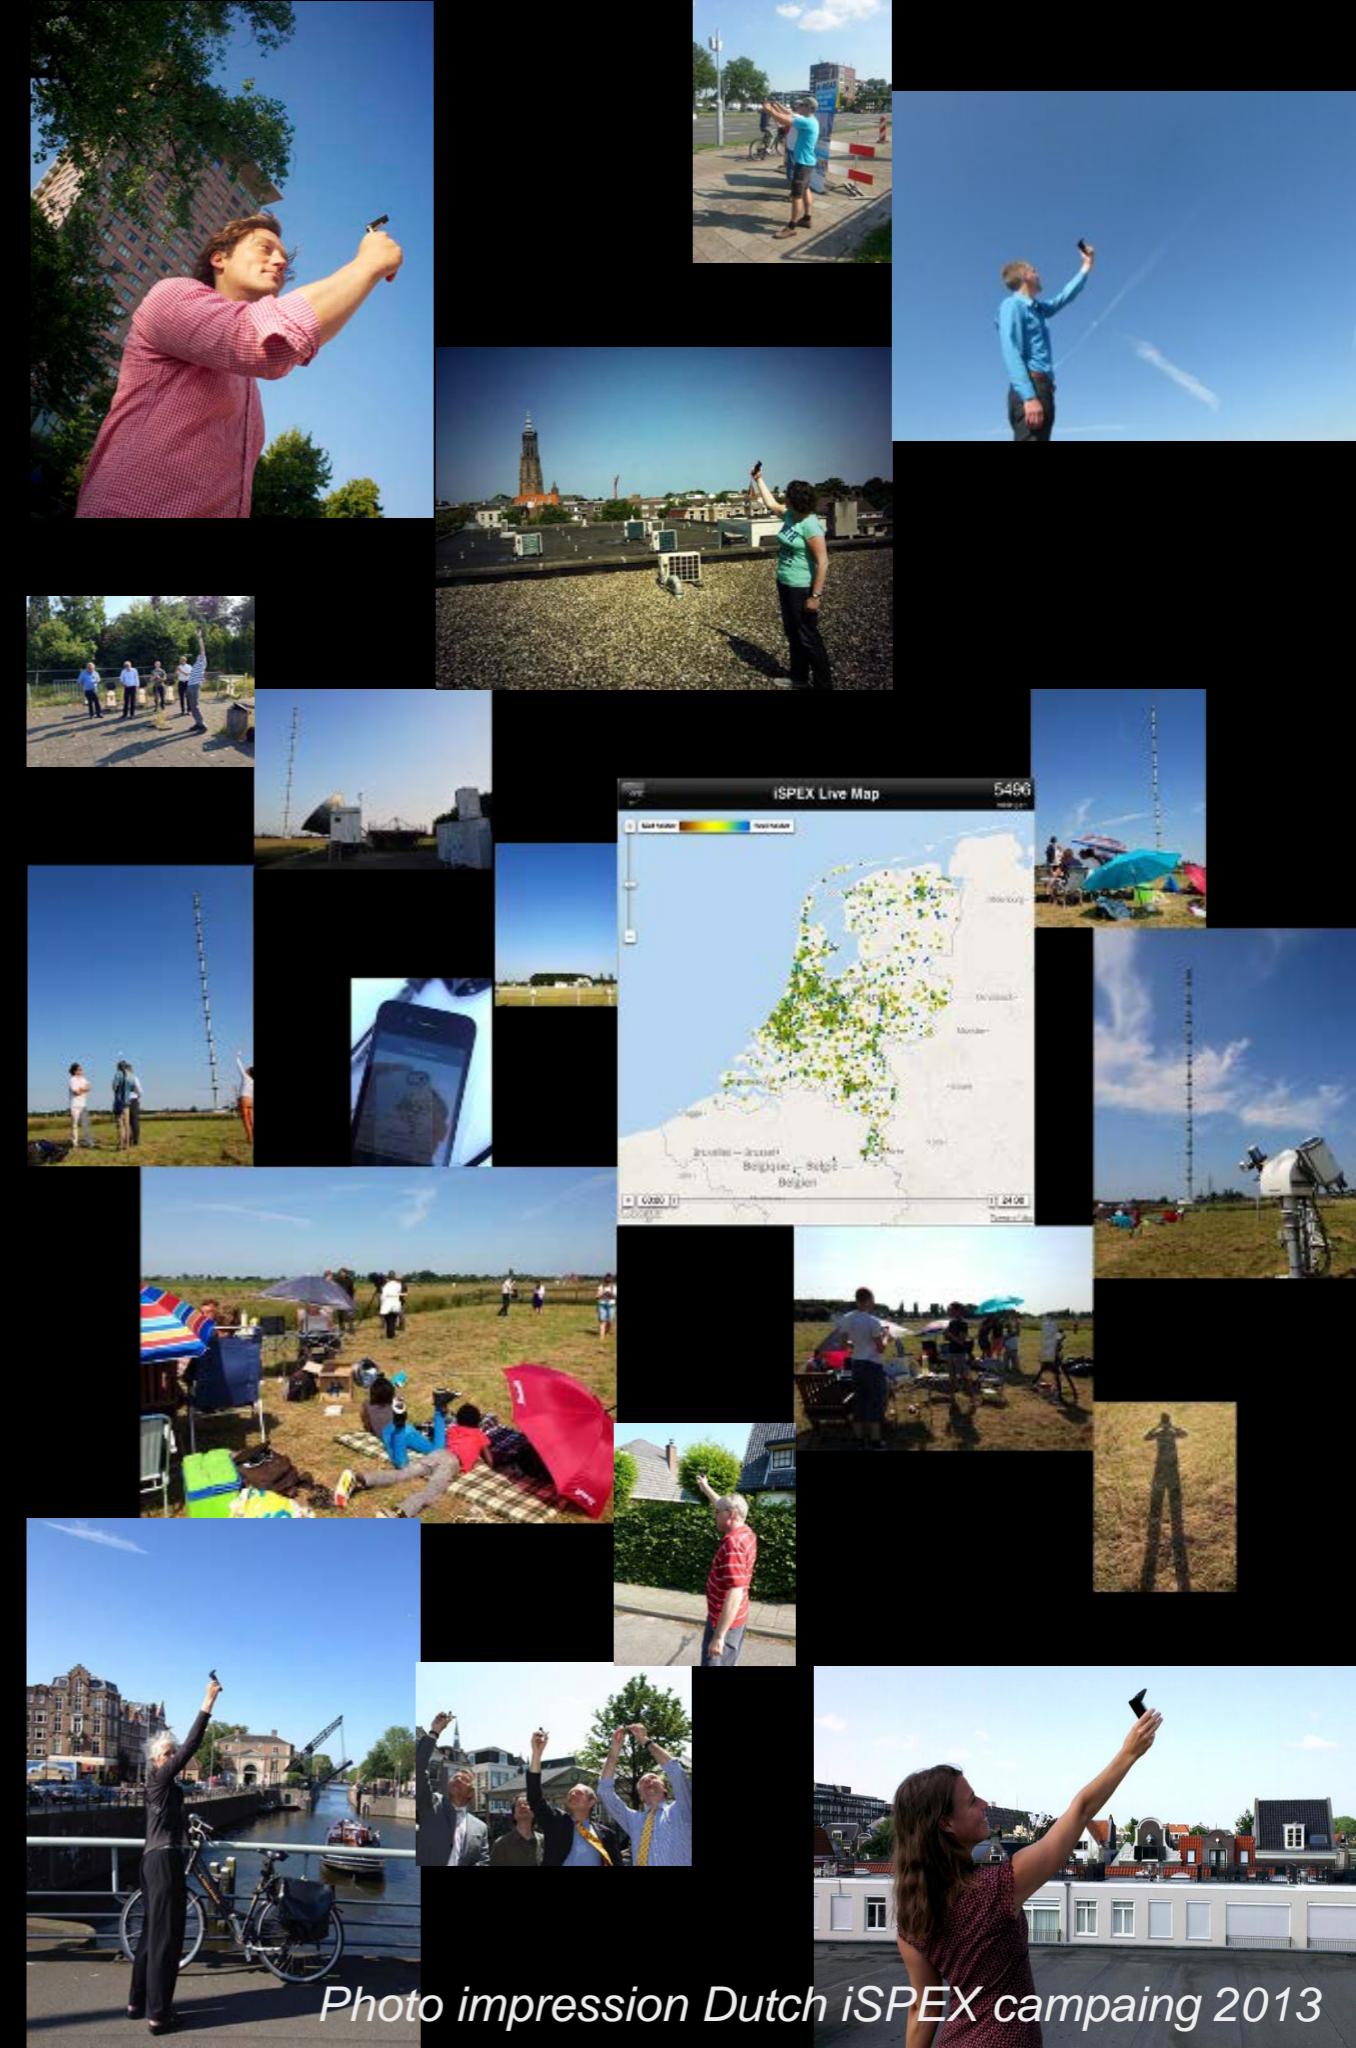

Photo impression Dutch iSPEX campaign 2013

LOCAL PARTNERS

1. Scientists involved in aerosol/air quality observation (e.g. AERONET, universities, EPA's)
2. Science outreach partners (e.g. Institute of Physics, observatories)

why:

- Scientific context, support, and potential future application
- Public outreach expertise and network

Goal: scientific and public outreach platform for iSPEX and related CS

*National Observatory of Athens, Athens University, Athens

ISPEX-EU CITIES

- Greece: Athens – [NOA/IAASARS](#) (partly included in BEYOND project)
- Spain: Barcelona – [ICFO](#), CREAL, Barcelona Univ., Barcelona Supercomp. Center
- Serbia: Belgrade - Belgrade Univ. (EPL), [Serbian Physics Society](#), Petnica
- Germany: Berlin – [MINT Impuls](#), FU Berlin
- Denmark: Copenhagen – [EPA Denmark](#)
- Italy: Milan – [Milan Univ.](#), Italian Aerosol Society, Rome – [ISAC-CNR](#), BARI – [ARPA Puglia](#), Univ. di Bari,
- UK: London – [IOP](#), STFC-RAL, Manchester – [Univ. of Manchester](#)
- France: Toulouse – [IRAP](#), [CNES](#), Observatoire de Mediterrane

AEROSOL MODELING DURING ISPEX-EU IN ATHENS

Modeling tool: COSMO-ART

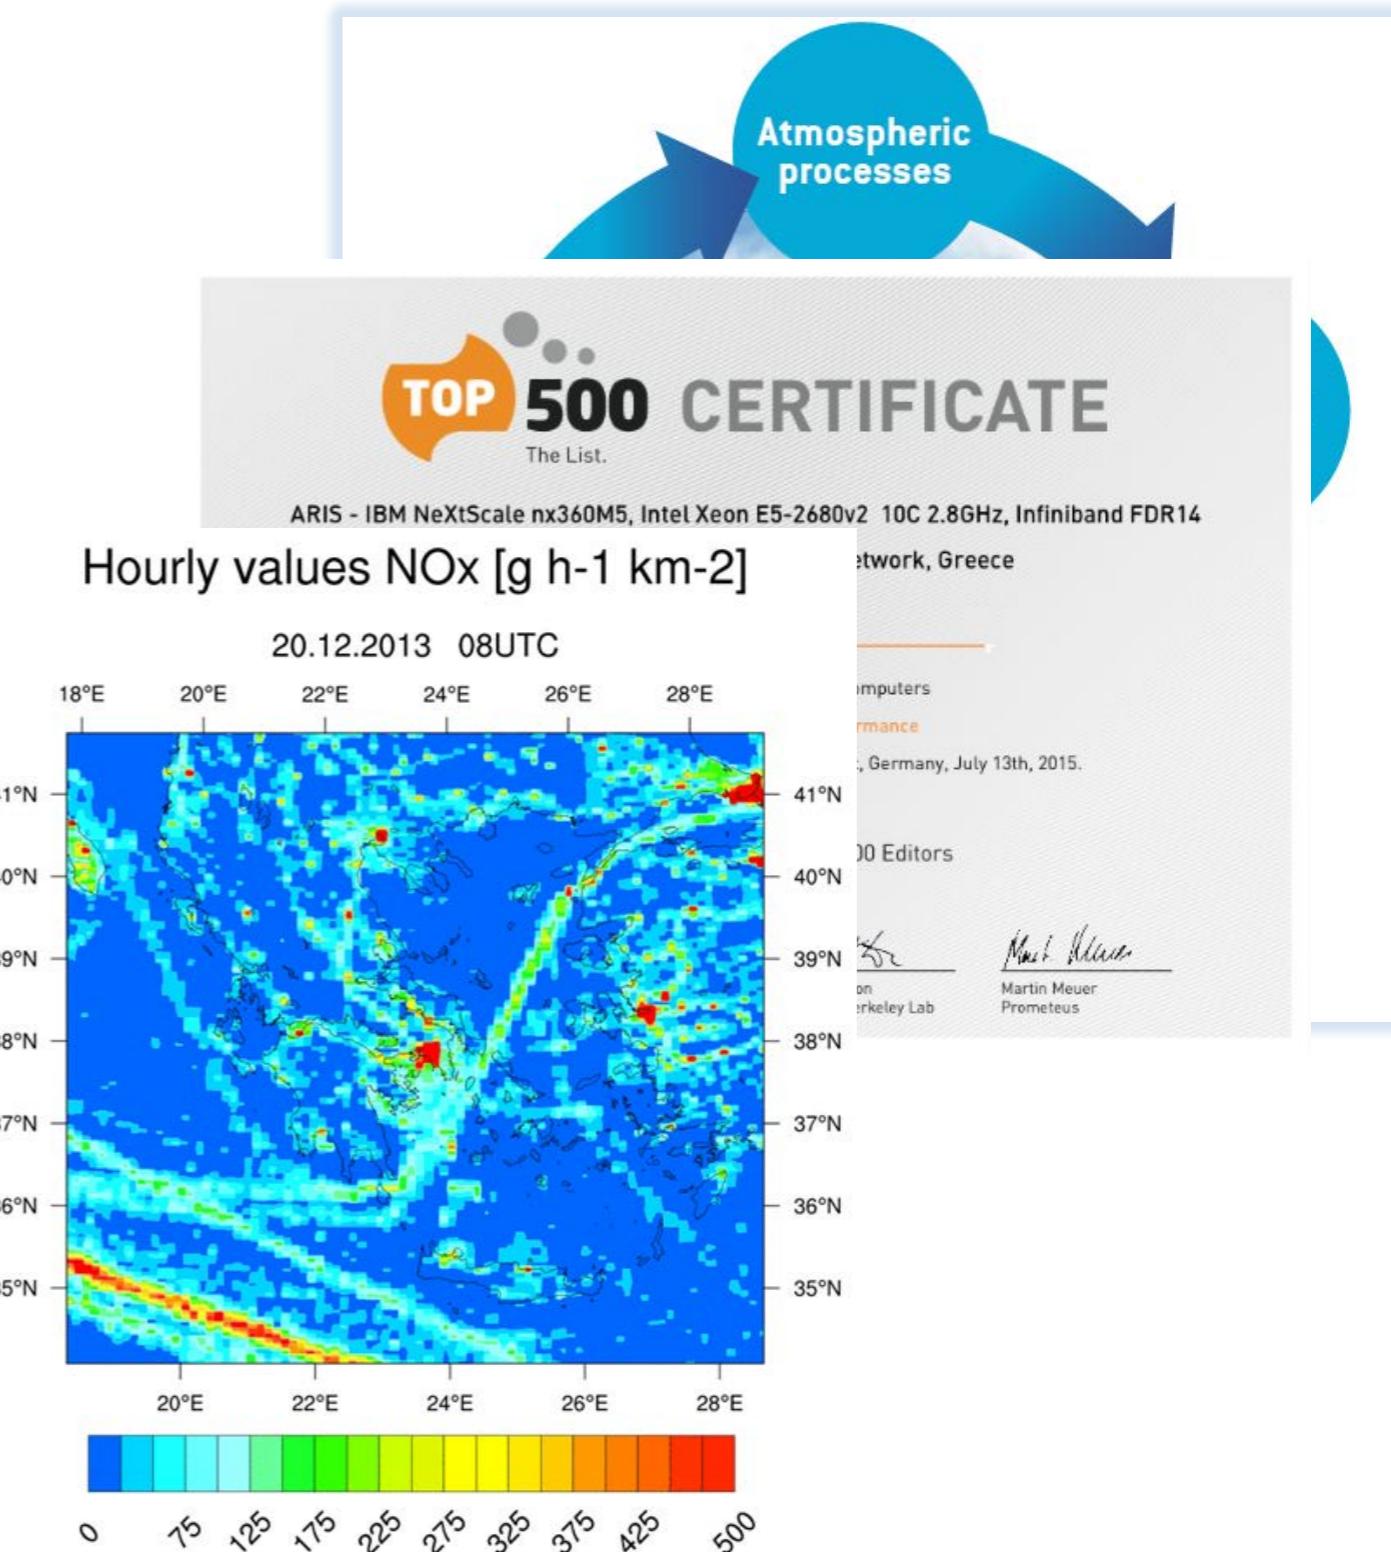

- Regional chemistry transport model online coupled meteorology (COSMO)

Collaborations for this action:

- EMPA, CH: *anthropogenic emission inputs (TNO-MACCII database)*
- German Weather Service: *meteorological inputs*
- Greek Research and Technology Network: *HPC resources (ARIS)*

Model setup for this action:

- High-resolution (<3 km) model application over Greece, centered in Athens

AEROSOL MODELING DURING ISPEX-EU IN ATHENS

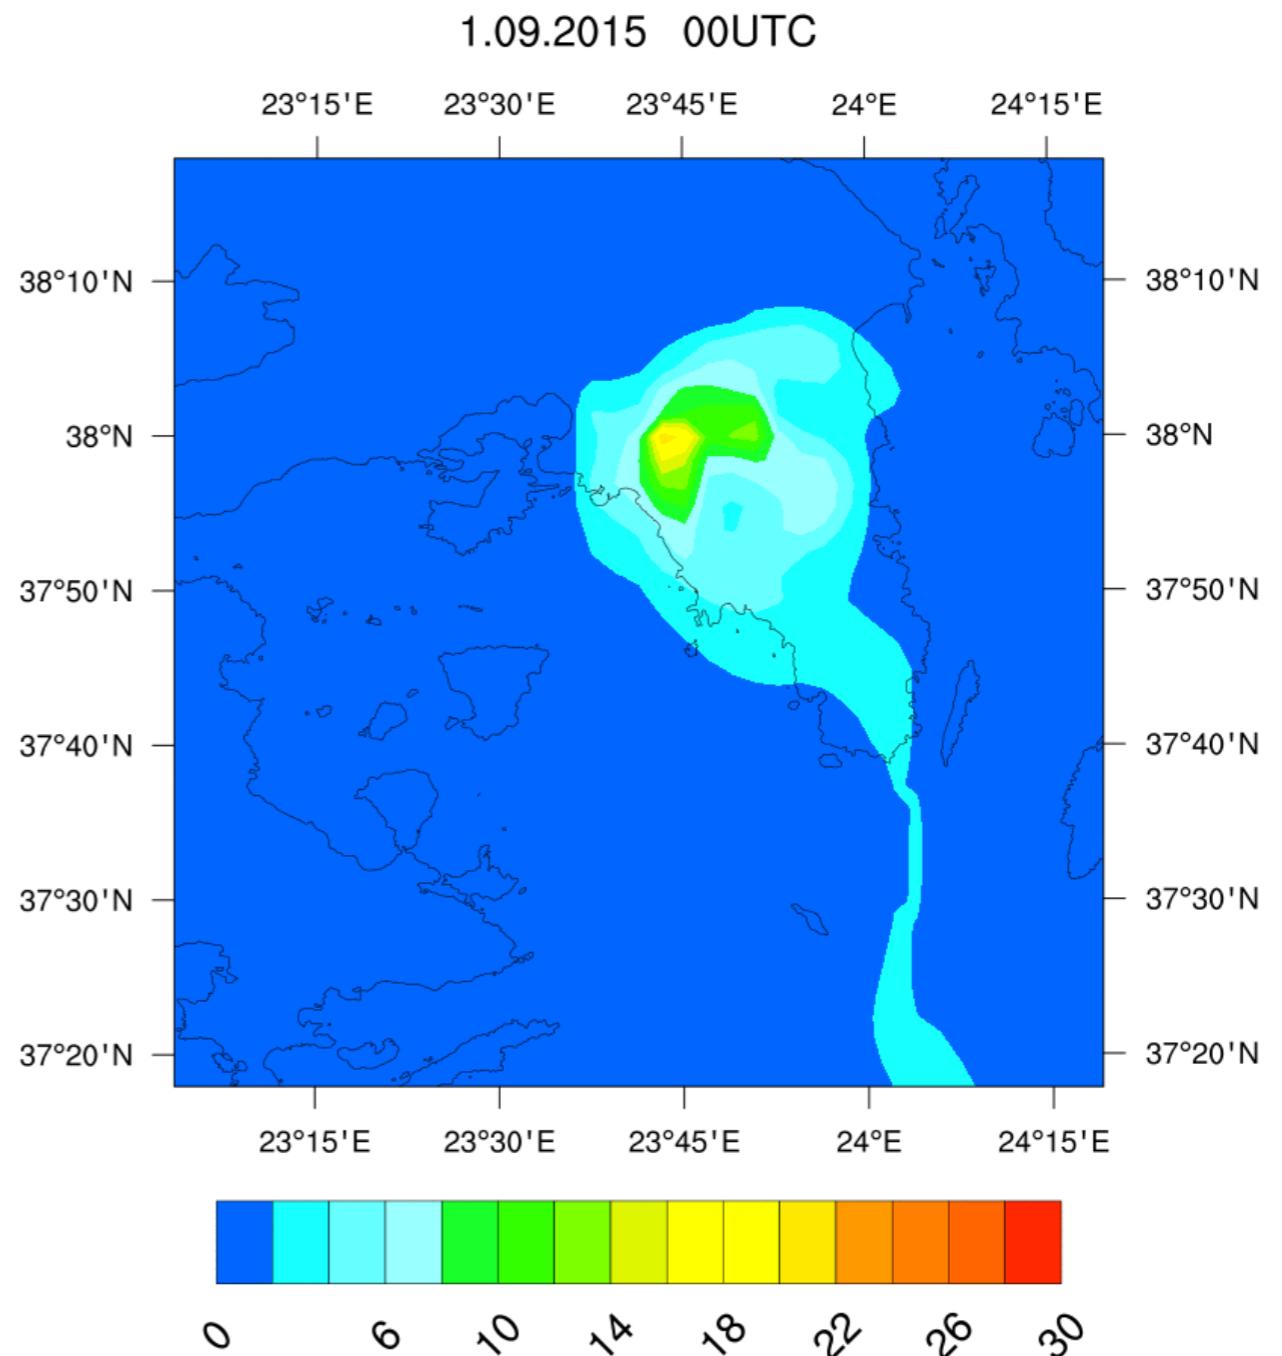

Preliminary model output

- PM₁₀ hourly concentrations
1-3 September

Ongoing work

- Full period simulation
- AOD outputs
- Chemical composition of PM10
- Aerosol feedbacks on atmospheric variables

Hourly values PM10 [ug m⁻³]
